

# UPDATES AND NEWS - MARCH 2019

## Stormwater Videos

Please watch our [water quality video](#).

### Environmental Fair and Pet Waste Station Installation

The Pepperell Branch Watershed Partnership recently had a big weekend in Opelika. Most recently, the group hosted an [Environmental Fair and installed Pet Waste Stations](#) around town.

## **Swimming Pool Discharge** (MS4 STORM WATER SYSTEM)

Many citizens believe it is acceptable to backwash or drain private swimming pools into the street, gutter, or storm water ditch, also known as the MS4 system. This belief is false and can result in prohibited or unlawful discharges from your property. Read below and familiarize yourself with your specific variety of pool to ensure the appropriate management practices and requirements are implemented.

### **Discharges of Chlorinated Pools**

Pool water treated with chlorine or any other chemical(s) is strictly prohibited from being discharged directly to the ground or municipal separate storm sewer system (MS4) by the local Opelika City Ordinance. Improperly discharged pool water can end up in local streams and creeks, ultimately harming fish & wildlife by altering water chemistry and lowering oxygen concentrations.

Pool discharge should be drained directly to the sanitary sewer system by means of a cleanout or alternative method. A flow rate of 12 to 15 gallons per minute (gpm) should be used when discharging pool water to the sanitary sewer using a cleanout. Any variance from this rate may cause waste to back up into the home from the force of water being discharged. As a safe measure, low lying drains within the home should be monitored during this process in the event a backup develops. The property owner is liable for any sewer back-ups or other damages. Do not use a private septic system. If you do not feel comfortable with this method or have questions, contact a licensed plumber.

Pool water may be discharged into the storm water system, *provided it is first dechlorinated* to a concentration of less than 0.1 milligrams per liter (mg/L). There are two ways to achieve this. **1)** Add no chemicals to your pool for two weeks, then test your water with a chlorine kit or pool technician. **2)** Dechlorinating tablets are available but must meet the < 0.1 mg/L concentration. Again, test to verify.

Seek advice using the provided link. <http://waterandhealth.org/newsletter/Draining%20Swimming%20Pools.pdf>

### **Saltwater Pools**

Saltwater pools use regular table salt to produce chlorine instead of powders or tablets. For pool salt to be effective, salt levels of 3,000 parts per million (ppm) are needed. This concentration of salt is equal to about 25 pounds of salt for every 1,000 gallons of water. Thus a 20,000-gallon pool holds approximately 500 pounds of salt. You can drain your saltwater pool onto your own property if it does not affect a neighboring lot. Remember however, salt does not evaporate like chlorine, so after your pool water has been drained salt can remain behind. This excess salt can kill your grass and build up in your soil, absorbing nutrients and causing long term harm to plants and preventing future growth. **DO NOT** drain a salt pool into the MS4 system. Salt water contains organic bromoform, which affects brain, liver, and kidney functions in animals. Salt water pools should be drained in the same manner as chlorinated pools described above. Again, be careful to avoid waste backups in your home by observing drains and regulating discharge rates.

### **Copper/Oxygen Systems**

Some other pool treatment options now utilize copper/oxygen systems. Copper is a registered EPA pesticide and kills pool algae, but not human pathogens. This too can be harmful to local storm water drains and can negatively affect wildlife. Use your sanitary sewer system to discharge copper pools as required in both chlorinated and saltwater pools. 2-2018.

**Be very careful with electricity around water and the use of metal poles.**

**Know where your breaker box is located.**

# Meeting Agenda

## **ALOAS Quarterly Meeting**

Bailey-Alexander Water & Sewer Complex, Auburn, AL

1. **Opening and Attendee Introductions**
  
2. **Alabama Water Watch and AU Water Resources Center Update (Eric Reutebuch)**
  
3. **Tom McCauley** – An update of the AU Stormwater Policy Initiative.
  
4. **Dan Ballard**
  - Discussion of brochures use, production, etc.
  - AL Stormwater Alliance Planning Group – Sharing of minutes from meeting, optional paths forward, etc.
  - P’Mill Intensive Bac-T Study – Sharing of prelim results.
  - Erosion and Sediment Control Workshop – Planning discussion.
  - New CoA Website and Watershed site (ALOAS site – changes etc.)
    - i. <https://www.auburnalabama.org/water-resource-management/watershed/aloas/>
  
5. **Lee County Water Festival**
  - Review and sharing of revised by-laws
  - Planning discussion (2018 kickoff meeting to be planned ASAP)
  - Committee Assignment discussion
  
6. **Updates from Stormwater Entities & Stakeholders**
  - Thoughts, concerns, or otherwise from MS4 Managing Partners
  - Upcoming events, training opportunities, etc.
    - i. Alabama Water Resources Conference – Sept. 6-8
    - ii. Next Stormwater Association Planning Group Meeting – Date TBD
    - iii. AWW Bac-T Workshop – Sept. 28 1-5
    - iv. AWW Water Chem. Workshop – Sept. 29 9-4
    - v. AWW Stream Biomonitoring Workshop – Oct. 28 9-4

Below I've listed a few things that come to mind.

1. Education in Schools- KOB administers the Clean Campus Program (a Keep America Beautiful certified program) to all students in the Opelika Schools. Every classroom, office and meeting room in Opelika Schools has a deskside recycling bin. Students are taught a variety of lessons on recycling, beautification, litter, clean water, Arbor Day and Earth Day. Six of the Opelika Schools have a garden (flower or vegetable) that is maintained with the help of students. Approximately 1 ton of recycling is collected at the schools each week.
2. Shred Day- KOB hosted a Shred Day in April 2018 and November 2018. Combined, we collected 25,600lbs of paper, 2,800lbs electronics and 1,000lbs cardboard. All shredding is done onsite by River Mills of Columbus, GA.
3. On March 2nd, KOB purchased 18 willow oaks to replace the 18 red maples in a public greenspace (Courthouse Square). KOB volunteers with the help of ESG Operations planted the trees.
4. In November, the City contracted services with a certified arborist to provide a tree assessment and inventory. This is a one year contract.
5. KOB awarded a quarterly Clean Business Award and Beautification Award (homeowner award). This recognizes property owners that do an excellent of upkeep and beautification.
6. In April 2018, KOB purchased 10,000 car litter bags. The bags are distributed from 12 locations throughout Opelika
7. On March 2nd, KOB hosted Citywide Cleanup. 235 volunteers from 24 groups picked up roadside litter, preventing waterway litter.
8. On February 28, KOB hosted Community Canopy Town Hall. This allowed residents to voice their suggestions and concerns over specific trees in Opelika.
9. Me & Case (most of the time) have talked to 1,140 students and 82 adults about litter and waterways (some was using the EnvironScape)

# How do spills affect our water?

**By Case O'Dell**  
*For the Opelika  
Observer*

Some of the most harmful pollutants to our waters in Opelika are chemicals that have been spilled or illegally dumped. Being a railroad community, Opelika has a very high potential for major spills with both the CSX and Norfolk Southern railroads running through town.

Additionally, Interstate 85 N brings many large tanker trucks and other heavy transports with a high degree of potential to pollute through the heart of Lee County.

But these major spills aren't the only ones that are cause for concern. Every day traffic accidents, spills during fueling, and other activities can lead to what are called illicit discharges.

To handle these spills, the City of Opelika must implement control measures that make up an Illicit Discharge Detection and Elimination (IDDE) program. IDDE is a way to identify, remediate, and prevent harmful discharges and is a

crucial component of protecting our water resources.

Perhaps you think these spills don't happen too often, but you might be surprised. Just picture how many times you leave the grocery store and see a pool of water in the parking lot with a colorful sheen. Or think about when you are filling your car at the gas station and notice how the asphalt in front of the pump is stained. Also pay attention next time you pass a traffic accident. It is likely that where a wreck has happened there is liquid or staining on the pavement. These are all indications that a chemical has illicitly discharged.

As previously discussed, this introduction of chemicals into the environment allows stormwater runoff to contact these pollutants and carry them to inlets and drains that flow directly to our local water resources. Here these compounds can alter water chemistry and lead to many adverse effects on fish and wildlife. Remember too that drinking water is drawn and treated from local

streams and lakes where stormwater carrying these pollutants often discharges.

The good news is there are certain practices that can be implemented at home and at work to better prevent illicit discharges. Periodically checking containers of chemicals and fuels around the house is an easy and preventative measure to take. Ensuring that driveways are free of oil stains will help in identifying potential leaks from automobiles. At work, make sure that storage tanks are accessible and have the appropriate spill cleanup materials nearby, such as shovels, absorbents and inlet protection

devices.

Finally, knowing who to call in the event of a spill is a very important step in identifying and eliminating illicit discharges. The Opelika Engineering office's stormwater coordinator can be contacted at 334-705-5450. For major emergency spills make sure to contact the Opelika Fire Department at 334-705-5339. For more information on how to prevent and better prepare for illicit discharges, visit the City of Opelika's webpage at [www.opelika-al.gov](http://www.opelika-al.gov) and search Stormwater Management under the Engineering Department tab.

# TIPS FOR A CLEAN STREAM

Summer days in the South are long and hot, and one of the best ways to enjoy the season is by attending a “fish fry” with family and friends. After a long day on the water, hours spent cooking at the fryer and intense yard games, a great deal of mess is left behind that needs cleaning up. Drink cans and bottles, plates, napkins and a large amount of used cooking oil all need disposing of. Paper products, plastic and aluminum cans may either be thrown in the trash or, more preferably, recycled. But what’s the best way to dispose of all that nasty oil?

*Jeter Recycling Center*

The best way to take care of used cooking oil is to pour it back into the container and take it Opelika’s Jeter Street recycling center. There it can be deposited into a bin that has been designated for fats, oils,

and grease (FOG’s). Unfortunately, used oil is often disposed of in a different manner, one that can lead to negative effects on both the environment and city infrastructure.

*Fats, Oil & Grease (FOG) bin located at Jeter Recycling Center.*

Perhaps the most popular way to dispose of used oil is to pour it down the sink or toilet. However, this oil cools and solidifies as it travels along drains and sewer lines. Once enough oil has accumulated in the line a back-up can develop. This leads to poorly draining sinks and toilets in your home. More dangerous though are clogs that develop in city sewer lines. Once oil builds up here it can lead to sanitary sewer overflows (SSO) that deposit raw sewage on private property where it eventually flows to local streams.

Another improper way to dispose of used oil is to pour it onto the edge of your yard. When this method is adopted, heavy rains carry oil to stormwater inlets, grates and eventually streams and creeks near your home. This oil leads to harmful stream conditions that may be fatal to fish and wildlife.

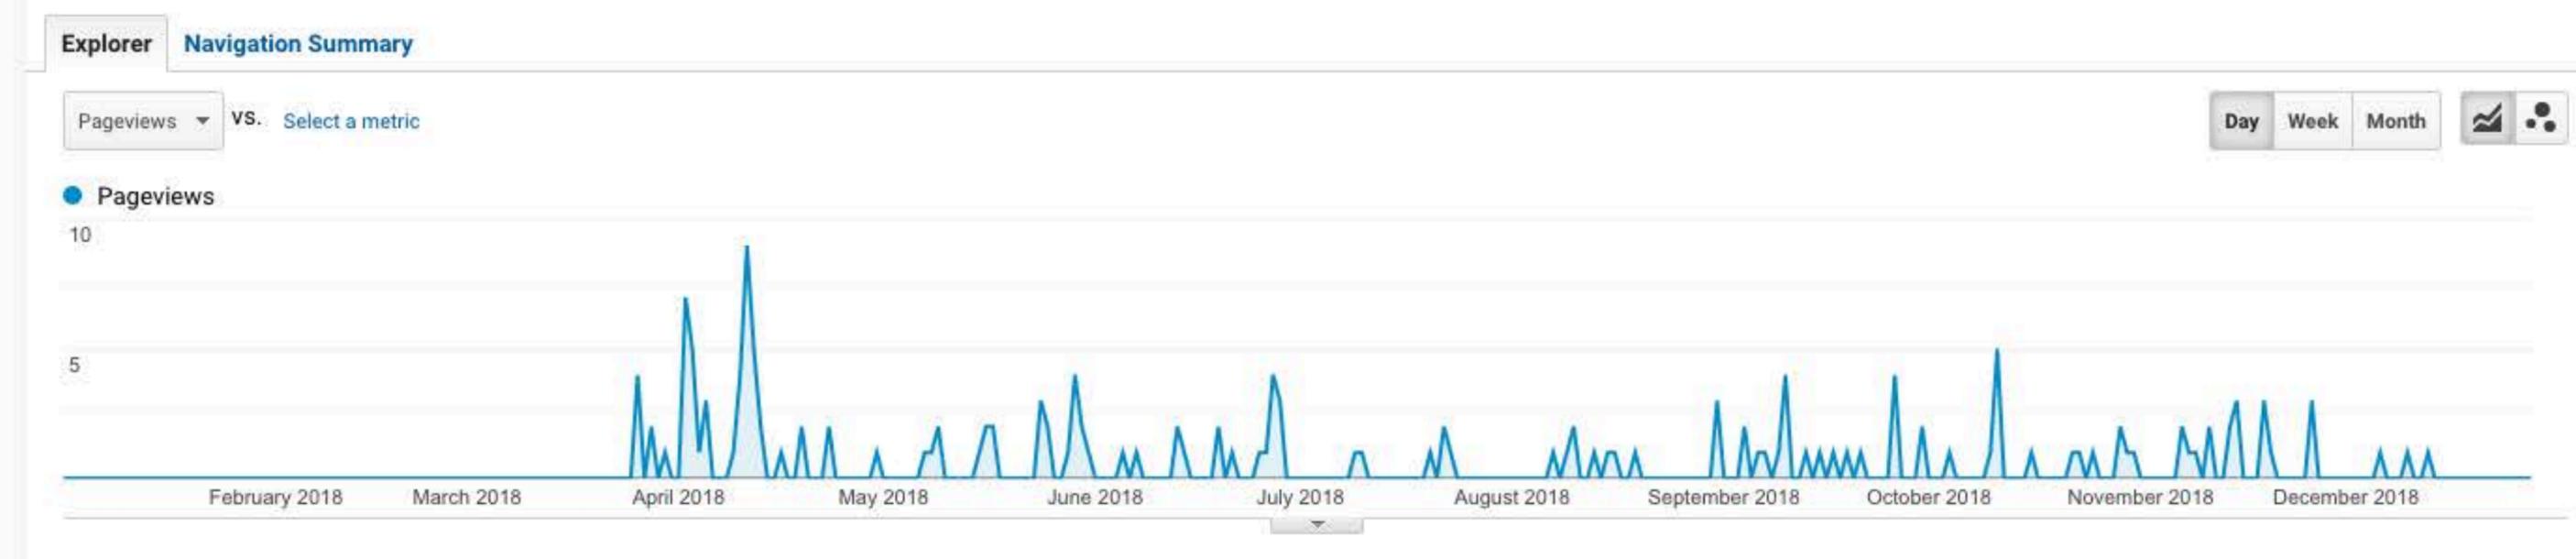

*Grease stain at a stormwater inlet.*

Remember that cooking oil poured down the sink or on the edge of the yard is not out of sight out of mind. Serious issues may develop in your own home or your neighbors, if missteps are taken in the disposal of oils, grease and fats. Take advantage of Recycling Centers provided by the city and do your part to be a steward of Opelika’s streams.
